DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 3-4, and 7 rejected under 35 U.S.C. 102(b) as being anticipated by Jamieson.

Jamieson discloses a stator winding for a brushless DC motor, the stator winding comprising at least two segments (20,22) having a respective plurality of turns, each segment including a respective tap (14,16) adapted to enable electrical connection of the segment to a power supply (25).

Regarding claim 2, Jamieson discloses the number of turns of each segment is selected based on a desired performance of the motor.

Regarding claim 3, Jamieson discloses the segments are electrically connected in series.

Art Unit: 2834

Regarding claim 4, Jamieson discloses comprising means for electrically connecting a selected one of the taps to the power supply, such that a stator current flows through a corresponding selected one or more of the segments.

Regarding claim 7, Jamieson discloses the number of turns of each segment is selected such that a total number of active turns yields a desired performance of the motor.

4. Claims 1-2, 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Wills et al.

Wills et al. disclose a stator winding for a brushless DC motor, the stator winding comprising at least two segments (152, 154) having a respective plurality of turns, each segment including a respective tap adapted to enable electrical connection of the segment to a power supply.

Regarding claim 2, Wills et al. disclose the number of turns of each segment is selected based on a desired performance of the motor.

Regarding claim 5, Wills et al. disclose the segments are electrically connected in parallel.

Regarding claim 6, Wills et al. means for electrically connecting a selected one or more of the taps to the power supply, such that a stator current flows through a corresponding selected one or more of the segments.

Regarding claim 7, Wills et al. disclose the number of turns of each segment is selected such that a total number of active turns yields a desired performance of the motor.
